TEXU
Twin-Calliper Disc Brake

Twin-Caliper-Disc-Brake for Hoist Drive of Container Cranes and Hot Metal Cranes

Advantages for the operator:

- reduced initial costs
- reduced operating costs due to smaller brake disc
- increased number of moves due to reduced disc inertia
- higher friction coefficient = higher torque = increased safety even under emergency stop conditions from overspeed
- safe load handling in case of grid failure

Advantages for the Crane OEM

- Reduced gear box costs due to reduced distance between input and output shaft ($A_1 : A_2$)
- Reduced length of input shaft ($B_1 : B_2$)
- Smaller bearing of input shaft
- Reduced costs for brake disc, electrical connection and PLC
